

## Pack-away doors

The IMPAC-O door is a high-speed door that opens and closes using a vertical pack-away operation. As our other high-speed doors the IMPAC-O model is suitable for applications where high speed opening and closing times are required. The door operates at speed up to 1 m/s. This model offers beneficial energy saving in both commercial and industrial applications. In addition it reduces noise and eliminates dust from nearby working areas.

## Roll-up doors

The Roll-O door is a high speed roll up door that opens and closes using a vertical roll-up operation. As our other high-speed doors the Roll-O model is suitable for applications where high speed opening and closing times are required. This type of door can be used in a range of applications including stand-alone or combination use and is ideally suited for internal applications where partitions are required between temperature controlled, dusty, noisy or similar areas.

## Flexible traffic doors

Flexible swing doors are suitable for doorways subject to high pedestrian and vehicle traffic. In addition to providing a reliable and robust entrance and exit solution, our flexible swing doors also provide excellent protection against noise and heat loss. Our swing doors include a reliable vertical spring mechanism concealed inside each door tube, this ensures a smooth opening and closing action making entry effortless. If required our swing doors can be also opened pneumatically.

## Strip curtains

Our pvc strip curtains are the simplest solution to install and maintain. Those are just some of the advantages or benefits you'll get if you choose to buy a Strip door: you'll have a great reduction of heat and cold air loss, a good isolation against noise, restricts dust, dirt, smoke, fumes and draughts and increases employees comfort by keeping temperatures under control. The transparency of the material provides an excellent visibility and the top quality features a long service life in heavy duty.
