

# WHY INSTALL OCM HIGH-SPEED DOORS: THE MAIN ADVANTAGES

Industrial high-speed doors are the optimal solution for companies in industry and commerce that aim to improve the logistical working environment due to the many benefits that high-speed industrial doors can offer.

## 1) HIGH SPEED OF OPERATION

Each high-speed door, whether roll-up, roll-up or self-repairing, operates at high speed by opening and closing quickly, reaching up to 2 m/s. This feature allows the smooth and flowing passage through the gap between one area and another by operators with vehicles and forklift trucks, as they do not have to get out of the vehicle to operate the door and close it behind them thanks to the relevant devices and controls, all while avoiding slowdowns and interruptions to production.

## 2) ENERGY SAVING

Our high-speed doors are very energy-efficient because high-speed operation decreases the time the door remains open in order to minimise heat or cold air loss, maintain a stable temperature and save energy.

## 3) SAFETY

Whichever type of high-speed door you choose, the safety of your workplace will be greatly enhanced. Safety is paramount, and our high-speed doors, which are extremely robust and made of high-quality materials, are a reliable and safe solution.

## 4) CUSTOMISATION WITH SEVERAL OPTIONS AVAILABLE

At OCM, every door we produce is custom-made to best suit the characteristics of the space in which it will be installed. In addition, we offer a wide range of finishes, colours and accessories to fully meet the needs of all our customers.
